Signia QuickTips: Improving Communication with Facial Mask Use

Wearing masks can become a communication challenge in two ways. First, masks cover the mouth, restricting any visual speech cues the wearer might receive. Secondly, masks can impact the acoustic properties of the speech signal itself. Discover a method to help your patients optimally hear speech from individuals wearing masks.

Courses/Podcasts

presented by Brian Taylor, AuD

In a Changed World, Optimizing Patient Outcomes Requires a Blended Care Approach

Although in-person care is likely to remain the gold standard after the Covid 19 pandemic, remote care (or eHealth) provides a boost in operational efficiency, offers added touchpoints that enhance patient outcomes and appeals to untapped segments of the market who until now have not sought help for their hearing difficulties. This 1-hour CEU course will review how evidence-based practice and relationship centered communication can be implemented in a blended approach to hearing care, including use of Signia's new suite of telecare services.

Interpersonal Audiology: Patient Centered Communication and Customizing the Patient Experience

Description of the SERIES: According to several studies, the quality of the interaction between the provider and person with hearing loss is the most significant predictor of hearing aid benefit. This series of podcasts, focused on collaborative, relationship-centered communication skills (Interpersonal Audiology), attempts to unlock how these skills can be brought to life in a busy clinic. Each of the 10 podcasts in this series focuses on an essential element of relationship-centered communication with an emphasis on first-time help seekers. In each episode, Lisa Klop and Brian Taylor discuss the how's and why's of various facets of Interpersonal Audiology, including triaging of persons with hearing loss into different intervention categories and collaborative goal setting & treatment planning - skills likely to increase in demand over the next few years.
